Objectives and Scope: Measurable Goals & Boundary Constraints

Phase 1: Project Charter & Boundary Definitions

Project: Global Olympic Sports Performance Analysis • **Author:** Md. Firdous Alam • **Era:** 1896–2016 Centennial Dataset

1. In-Scope Project Deliverables

The scope encompasses all official Modern Olympic Games sanctioned by the International Olympic Committee (IOC) from 1896 Athens through 2016 Rio de Janeiro. All analytical outputs are segmented into two distinct analytical tiers: the full Centennial Historical Archive (1896-2016) and the Modern Era High-Density Cohort (1980-2016, 157,417 records).

- Delivery of clean, deduplicated datasets: athletes.csv (21.73 MB) and medal_results.csv (3,837 rows)
- Production of 5 high-resolution 300 DPI analytical visualization artifacts
- Authoring and cloud publishing of 2 interactive Tableau Public dashboards
- Deployment of a responsive Flask web application with live REST API endpoints
- Production of an exact 5-minute (300.0s) executive demo video

2. Explicit Out-of-Scope Boundaries

To ensure maximum analytical precision, certain sporting competitions are deliberately excluded from this analysis:

- Paralympic Games and Special Olympics (distinct governing bodies and classification systems)
- Youth Olympic Games and regional continental games (e.g., Pan American Games)
- Unofficial demonstration sports without official medal standing
- Intercalated 1906 Olympic Games (not recognized by the IOC as official Olympiads)
